## Color OneScanner 600/27: Requires Display of 640x480 (8/96)

Article Created: 1 August 1996

TOPIC -----

I am trying to use an Apple Color OneScanner 600/27 with a Macintosh 12-in. RGB Display. When I open the Dispatcher software, I am not able to scan an image because the controls are off the screen. How can I use the dispatcher software?

DISCUSSION -----

The Dispatcher software which comes with the Apple Color OneScanner 600/27 requires a minimum resolution of 640x480. Since the Macintosh 12-in. RGB Display only has a resolution of 512x384, you cannot use it with the Dispatcher software. You must use a display capable of 640x480 or greater (including PowerBook computers).

One other thing to keep in mind, is that ColorSync was designed to work with a resolution of 640x480 or greater. Since the Macintosh 12-in. RGB does not work at that resolution, even if you were able to scan images, the colors you get may not always be what you expected.
