Color OneScanner 600/27: 60 DPI Software Limitation (8/96)

Article Created: 8 August 1996

TOPIC --

The User's Guide for the Apple Color OneScanner 600/27 states that you can scan
at 12 Dots Per Inch (DPI), however the Dispatcher software only gives the option
of 60 or 75 DPI. How can I select 12 DPI?

DISCUSSION ---

The 12 DPI is the hardware limit of the scanner. The software lower limit, as
you noticed, is 60 DPI. The Preview uses a 75 DPI scan and the thumbnails are
interpolated in the software. The 12 DPI is not used with the Apple software.
There may be other third-party software, such as plug-ins, that take advantage
of the 12 DPI, but Apple is not aware of any.
