## Mutoh Plotter: Macintosh Compatibility

This article last reviewed: 13 October 1989

TOPIC -----

I need compatibility information about the Mutoh plotter series, especially IP-500 and IP-530. Which Macintosh software can drive it? Will MacPlot Professional drive it? Which standard plotters (if any) are these Mutoh plotters compatible with? The data sheets only say that they are HPGL-compatible.

DISCUSSION -----

We contacted the Mutoh Sales Office in Southern California and found that the IP-500 emulates an HP-7580. All they had to say about the IP-530 was that it is HPGL-compatible. It doesn't emulate any specific plotter. The folks at Microspot (MacPlot driver) would not guarantee that the Mutoh plotters would work with their product, because they haven't been tested. They stated that there should be no problem driving any HPGL-compatible plotter.
