Epson LX-800 Printer Connectivity

This article last reviewed: 7 September 1990

TOPIC --

Can an Epson LX-800 printer be directly attached to a Macintosh?

DISCUSSION ---

The Epson LX-800 is a 9-pin dot-matrix parallel printer. Connecting it to a
Macintosh would require the use of an optional serial interface and a driver
designed for Epson printers. Many third parties listed in the Menu Library on
AppleLink produce drivers for the Epson line of printers.
