ASFU Fixer for GDT's PowerPrint-Not Apple Print Pack (12/96)

Article Created: 3 May 1994
Article Reviewed/Updated: 3 December 1996

TOPIC ---

The 'ASFU Fixer' from GDT does NOT patch the Apple Print Pack, only the Power
Print product from GDT.

DISCUSSION --

In summary:

To use DOS printers on Power Macintosh computers:
 1) All Apple Print Pack customers MUST upgrade to GDT's Power Print
     Product using the upgrade card in the original Apple Print Pack box.
     (approx $40)
 2) GDT Technologies will then issue the "ASFU Fixer" to patch the Power
     Print product (not the Apple Print Pack) and then it will be compatible
     with Power Macintosh computers.

IMPORTANT:
You should use the system extension SerialDMA instead of ASFU Fixer. If you use
ASFU Fixer with several Apple Newton software applications and tools, you may
not be able to use the serial communication connection.
