Color STW 2400: Driver Supports Serial & LocalTalk (4/96)

Article Created: 1 May 1995
Article Reviewed/Updated: 10 April 1996

TOPIC --

I added the LocalTalk module to my Color StyleWriter 2400 printer, and there was
no additional software with the LocalTalk module. Do I need a new printer driver
for the LocalTalk option?

DISCUSSION ---

Because the Color StyleWriter 2400 printer software supports both serial and
LocalTalk, no additional printer driver is required.

When you select Color SW 2400 icon in the chooser, the chooser displays
available serial ports (printer, modem, or printer/modem) and all networked
Color Stylewriter 2400 class printers. This includes the Color StyleWriter 2400
with the localtalk module installed, or GrayShare Color StyleWriter 2200, which
are using GrayShare.

All versions of the Color StyleWriter 2400 driver work with all types of
networked StyleWriter printers mentioned previously. However, Apple recommends
upgrading to version 2.1 or greater of the Color StyleWriter 2400 printer
driver. Use the latest version of the Color StyleWriter 2400 printer driver. The
article titled "Apple Printers: Printer Drivers & Cables" lists the latest
driver versions.

These articles can help you locate the software update mentioned here:

• "Where To Find Apple Software Updates" - Lists online services for free Apple
software updates.

• "Obtaining Apple Product Support in the USA" - Lists 800 numbers and online
services for software updates, Apple support information, and a subset of the
Apple Tech Info Library.

Article Change History:
10 Apr 1996 - Added latest printer driver version reference.
06 Dec 1995 - Clarified discussion area.
