## ImageWriter I: Problems with ImageWriter II driver version 2.0

If the ImageWriter I starts printing normally and ends printing nonsense, the printer may be mistakenly driven by the new ImageWriter II driver version 2.0. Do NOT use this new driver with the old ImageWriter; the new driver takes up more space and gives you no new features because the old printer doesn't take color ribbons, doesn't print bidirectionally, and doesn't work with the single sheet feeder.
