## ImageWriter LQ: No Best Quality With QuickDraw GX (11/94)

Article Created: 2 November 1994

TOPIC -----

I am using the QuickDraw GX printer driver with my ImageWriter LQ. When I print using QuickDraw GX Savvy applications, like SimpleText or Microsoft Word 6.0, and using Best quality my documents don't look as good as when I am using the non-QuickDraw GX printer driver. Why?

DISCUSSION -----

The ImageWriter LQ GX driver, when used with GX-savvy applications, doesn't support the Best quality option. The selection is available, but it does not work. Engineering is aware of this problem and will release a new ImageWriter LQ GX driver in a future release of QuickDraw GX.

The current workarounds are to disable GX, use GX Helper, or use a non-GX-savvy application in order for the regular ImageWriter LQ print dialog to appear.
