ImageWriter II: ClarisWorks Print not Centered (5/94)

Article Created: 20 May 1994

TOPIC -----

When I print a ClarisWorks document to an ImageWriter II, the right margin is larger in print than it was on the screen.

DISCUSSION -----

According to Claris Technical Support, it is a known issue that centered text in ClarisWorks 2.x prints narrower than it should to an ImageWriter II. This makes the right margin appear to be larger than it is on the screen.

The fix is to 'fool' ClarisWorks by decreasing the right margin, so that centered text will print 'centered,' although it will not be centered on screen.
