CLW 12/600 PS: Config RPRINTER on Netware 3.1.x (10/96)

Article Created: 2 November 1995
Article Reviewed/Updated: 23 October 1996

TOPIC ---

This article provides the documentation for setting up a Color LaserWriter
12/600 PS or Color LaserWriter 12/660 PS printer in RPRINTER mode on a Netware
3.12 server. This information is not in the printer User Manual.

DISCUSSION --

Step 1 - Apple Printer Utility
==============================

1) From a Macintosh Launch Apple Printer Utility
2) Make sure that RPRINTER is selected
3) Enter a name into the Remote PSERVER name
   Note: Write down the Remote PSERVER name for later
4) Select Port configuration, ensure that Netware is set to ON
5) Exit the Apple Printer Utility

Step 2 - Configure with PCONSOLE
================================

NOTE: The Color LaserWriter 12/600 PS or Color LaserWriter 12/660 PS must be
configured as printer "0". This is not an option because other printer
number assignments do not work. This may require recreating
configurations for other printers being serviced by PSERVER.

 1) Run PCONSOLE from a DOS Client
 2) Select Print Server Information
 3) Press INS to create new print server
 4) Enter the Print Server name from Step 1
 5) Press Return
 6) Select Full Name press enter
 7) Enter: RPRINTER <Any Printer Name> <0> - and press enter
    Note: This printer requires the first Printer definition, that is "0",
    to work properly, also write down the printer name for later
 8) Select Print Server Configuration
 9) Select Printer Configuration
10) Select printer 0 not installed

11) Enter the name enter into "Full Name"
12) Select Type - press return
13) Select Remote other unknown - press return
14) Press escape back to Available Options - answer yes when prompted to
    save
15) Select Print Queue Information
16) Press INS
17) Enter any name for a queue name
    Note: Write down the Queue name for later
18) Press enter
19) Press enter on that queue name
20) Select Queue Servers press enter
21) Press INS
22) Select the queue server name that you entered earlier
23) Press return
24) Press ESC until you are back to available options - Save any changes
    if asked
25) Select Print Server Information Menu press return
26) Select Print Server Configuration
27) Select Ques Serviced by Printer
28) Press return twice
29) Press INS
30) Select the Queue that you have setup for this printer - press enter
    twice
31) Escape out of PCONSOLE - saving changes of asked
32) At the Netware server:
    Enter: LOAD PSERVER <REMOTE-PSERVER-NAME>
    The REMOTE-PSERVER-NAME will be the same from Step 1

Step 3 - Restart Printer
========================

If the printer does not show waiting print job on the PSERVER screen,
restart the printer.

Step 4 - Print to the Queue
===========================

1) Enter: capture q=q_name/no banner/ti=5
2) z:
3) print fontlist.ps

Article Change History:
23 Oct 1996 - Added Color LaserWriter 12/660 PS.
05 Mar 1996 - Removed LaserWriter 16/600 PS from article.
05 Feb 1996 - Updated Step 2, and added LaserWriter 16/600 PS printer.
