Color LW 12/600 PS: Using Special Features in Windows NT (11/95)

Article Created: 13 November 1995
Article Reviewed/Updated: 27 November 1995

TOPIC ---

I need to setup fonts, margins, watermarks, and print quality for the Color
LaserWriter 12/600 PS printer. My Color LaserWriter 12/600 PS is connected to a
Windows NT computer, and since the Apple LaserWriter Utility does not work on
Windows NT, how do I change these things?

DISCUSSION --

For these particular options you do not need the Apple Printer Utility, they can
be done on a per job basis from either Windows NT, the client sending the print
job, or the application that is printing the job. If you need to use the Apple
Printer Utility, you can use this utility from a Macintosh using AppleTalk, or a
Windows client directly connected to LPT1 or connected using Netware.

Font Sets

From Windows NT, open the Color LaserWriter 12/600 PS driver ICON. Select
Properties from the first menu. Select setup, font substitution. Also on a per
job basis from a remote client, from the application the customer may select
Print Setup, Options and Fonts for full font control.

Print Quality

From Windows NT open the Color LaserWriter 12/600 PS driver ICON. Select
Properties from the first pull down menu. Select details, job defaults, options.
Also be aware that If you are printing from a remote client you have options
from the Control Panel for Print Setup, and you may also have the some options
built into the application you are printing from.

Margins

Setting margins is not usually an option in the driver, these are handled by the
application you are printing from.

Watersmarks

Watermarks are supported from the Windows NT spooler, but can be selected from
the client once again from the application select Print Setup, Options and

Watermarks.
