CLW 12/600 PS: Windows 95 Problems w/ vecpd.386 (2/97)

Article Created: 11 December 1995
Article Reviewed/Updated: 27 February 1997

TOPIC ---

I have installed Windows 95 on my PC-compatible, and I am having some trouble
printing to the Color LaserWriter 12/600 PS printer. I was able to print using
Windows 3.11.

DISCUSSION --

The Color LaserWriter 12/600 PS printer software for Windows 3.1x installs
VECPD.386, a bidirectional parallel port driver that was not intended for
Windows 95. If you upgrade to Windows 95, or install the Windows 3.1 printer
software after installing Windows 95 the VECPD.386 file is installed. This file
prevents the computer from being able to access the printer port properly. To
prevent VECPD.386 from loading, remove the following line from the [386 enh]
section of SYSTEM.INI and restart your computer:

device=vecpd.386
