## LaserWriter: Printing to It With DECserver

This article last reviewed: 13 January 1988

You can use DECserver to print with Macintosh and LaserWriter:

Wire the Macintosh modem port into the DECserver and hang the LaserWriter off the same server, but a different port. Use the Async LaserWriter with the Direct.ACL file.

- Set the various parameters of the server (name, baud rate, XON, etc.) to correspond to the LaserWriter.
- Start up Mac240 on the Macintosh, log in and choose 'C LaserWriter'. Quit Mac240.
- Start up PageMaker. From the Choose Print option under the File menu, select the Apple Driver to be used through the modem port.

NOTE: Only one user can have access to the port while this process is in effect.

- Select Async LaserWriter from the Chooser.
