LaserWriter 12/640 PS: Complex Jobs Require More RAM (6/96)

```
Article Created: 13 June 1996

TOPIC -----------------------------------------------------------

I am trying to print a document which contains multiple pages on a LaserWriter
12/640 PS printer. However, I continue to get a single sheet of paper with text
that reads:

%%[Error: ioerror; OffendingCommand: image; ErrorInfo: DCTDecodeFilter Cannot
allocate 58608 bytes ]%%
%%[Flushing: rest of job (to end-of-file) will be ignored]%%

Why can I not print this document?

DISCUSSION ------------------------------------------------------

The document you are trying to print is too complex for the amount of RAM you
have installed in the printer. When either complex images or documents
containing a large number of multiple fonts on a single page are sent to a 4MB
LaserWriter 12/640 PS printer, you will see this error.

The only way to prevent this in the future is to either simplify your documents
or add additional memory.
