## LaserWriter 12/640 PS: Duplex Option Is Not Available (6/96)

Article Created: 13 June 1996

Article Reviewed/Updated: 24 June 1996

TOPIC -----

I installed the optional duplexer on my LaserWriter 12/640 PS printer, but the duplex option is dimmed. How do I use the duplex option?

DISCUSSION -----

In order to use the optional duplex accessory, you must have a minimum of 12MB of RAM in your LaserWriter 12/640 PS printer. The table below shows the options available depending on the amount of RAM you have installed. The LaserWriter 12/640 PS printer uses industry standard 72-pin SIMMs (70ns or faster). The Tech Info Library article titled "LaserWriter 12/640 PS: Memory Configurations" contains a complete list of possible memory configurations.

Begin\_Table

RAM Installed	Options Available
4MB (Standard)	None. You cannot access either PhotoGrade or duplex printing.
12MB	You can enable either PhotoGrade OR duplex printing.
20MB	You can enable both PhotoGrade and duplex printing. Duplex printing is available up to to US letter.
24MB and greater	You can enable both PhotoGrade and duplex printing. Duplex printing is available for all paper sizes including US legal.

End\_Table

NOTE:

Additional memory also enables you to download additional fonts and provides greater document caching.
