LaserWriter 16/600 PS: No PCL5 through EtherTalk (11/94)

Article Created: 22 November 1994

TOPIC ---

I am using a LaserWriter 16/600 PS printer in conjunction with an EtherShare
Server. The original files are created on a Sun workstation, and sent to the
EtherShare server. The LaserWriter 16/600 PS is using the Ethernet port.
however, using the Ethernet port with the Ethertalk protocol, it is not possible
to set up the LaserWriter 16/600 PS in Auto select mode (PostScript and PCL5
mode). The only protocol available using the Apple Printer Utility is PostScript
or none.

DISCUSSION --

PCL5 is not supported using the EtherTalk communication channel. However, PCL5
is supported on IPX and IP network communication channels. You can configure
these channels for PostScript, PCL5, or Autoselect. Since Sun workstations can
use LPR over TCP/IP, you can use this method to print directly to the
LaserWriter 16/600 PS printer.
