TOPIC -----

Does LaserWriter driver 7.1.1 fix the compatibility problems with some clone PostScript interpreters and LaserWriter driver 7.1?

DISCUSSION -----

No. This new driver does not address the compatibility problems between LaserWriter driver 7.1 and some third-party printers because this is not a 7.1 driver problem. This is an issue with the clone PostScript interpreters (PhoenixPage and TrueImage) these printers use, and which deviate from the Adobe standard interpreter.

Apple is working with the companies that sell these interpreters to provide a fix. Until a fix is available, Apple recommends that you continue using LaserWriter driver 7.0.
