LaserWriter 8.4: PostScript VM Errors (6/96)

Article Created: 13 June 1996

TOPIC ---

I am using the LaserWriter 12/640 PS printer, and printing a complex document.
However, when I try to print the document I keep getting a single page with some
printing that says something about a PostScript VM Error.

I tried printing the document on a different LaserWriter and it printed
properly. Why?

DISCUSSION --

When printing very complex documents with multiple fonts and graphics you may
see this. This is related to the LaserWriter 8.4 printer driver, which ships
with the LaserWriter 12/640 PS printer.

There are a few things you can do that will help when using the LaserWriter 8.4
printer driver.

- Reduce the number of fonts used in the document.
- Turn ON Unlimited Downloadable Fonts in a Document
- Use a previous version of the LaserWriter driver (8.3.4 is the latest version
of the 8.3.x driver).
