LaserWriter 8.4: Trouble Printing Documents in Foreground (6/96)

Article Created: 13 June 1996

TOPIC -----

I am using the LaserWriter 8.4 printer software, and when I print from several of my applications, the printing fails. Why?

DISCUSSION -----

The LaserWriter 8.4 printer driver offers both foreground and background printing. When you use foreground printing, the driver does not create a spool file on your hard disk, while this increases the printing time, this also causes printing problems with some applications. Applications known to have problems using foreground printing, there may be other applications as well, include Adobe Persuasion, Adobe Photoshop, Microsoft PowerPoint 4.0, Microsoft Excel 5.0, Intuit Quicken 6.0, Claris Draw, and Claris Impact.

To print properly from these applications, turn ON background printing in the print dialog.
