TOPIC ------------------------------------------------------------

I have a Macintosh IIcx with System 6.0.2 on a network with a LaserWriter
IINTX. The NTX has an Apple SCSI hard disk.  This configuration worked fine
with 5.2 LaserWriter drivers and the 4.0 font downloader.  However, when I
load the 6.0 drivers, it downloads only the Times font and displays the
PostScript error:

    Invalid printer, offending command:font downloader

Now, with 5.2 drivers re-installed, it continues to mess up.

DISCUSSION -------------------------------------------------------

This may or may not be the cause of your particular problem, but System
6.0.2 is not compatible with the Macintosh IIcx.  The minimum software
version is System 6.0.3, and we recommend running the System 6.0.5.

This problem sounds most like system software and/or driver corruption.  We
suggest you do the following things:

1) Run the Find File desk accessory ensure you don't have multiple
   System Folders on your hard drive

2) Regardless of how many System Folders you have, throw them all away
   after saving copies of any third-party INITs or CDEVs that you haven't
   backed up.

3) Use the Installer to install new System software and LaserWriter
   drivers onto the hard drive.  Make sure the operating system version is
   at least 6.0.3.
