TOPIC ------------------------------------------------------------

The manual for the LaserWriter IIf and LaserWriter IIg states that there is
a non-printable margin around the page of 5mm.  All of the LaserWriter IIf
printers I've printed on have an unprintable area of: top=10mm,
bottom=10mm, left=10mm, right=6mm.

DISCUSSION -------------------------------------------------------

The LaserWriter IIf and LaserWriter IIg have a non-printable margin of 5mm
around the page.  The problem you have is due to a lack of memory in the
LaserWriter IIf.  The largest page size a 2MB LaserWriter IIf can print is
a4small, which is 7.68 by 11 inches.  The default page size that is used is
lettersmall, which is 7.89 by 10.30 inches.  A 2MB LaserWriter IIf can't
print a letter size (8.11 by 10.79 inches), or legal size (8.11 by 13.79
inches) page.  The only way around this is to upgrade the memory of the
LaserWriter IIf to 4MB.

A 4MB LaserWriter IIf can print any of the following page sizes:

   legal:        8.11 by 13.79 inches
   a4:           7.89 by 11.44 inches
   letter:       8.11 by 10.79 inches
   a4small:      7.68 by 11 inches
   lettersmall:  7.89 by 10.30 inches
   b5:           6.72 by 9.81 inches
