## LaserWriter IIf and IIg: Controller Board Slot Is for Testing

Article Created: 14 February 1992

Article Last Reviewed:

Article Last Updated:

TOPIC -----

I noticed that on the LaserWriter IIg controller board there is a socket that looks like the usual processor-direct slot (not the SIMM slots). What is it for?

DISCUSSION -----

This slot is used by test fixtures at the factory and Level 2 service repair center to test the LaserWriter IIf and IIg logic boards. It is analogous to the edge connector on the Macintosh II logic board.
