LaserWriter IIf & IIg: PhotoGrade, FinePrint & Microfine Toner

Article Created: 7 October 1991

Article Last Reviewed:

Article Last Updated:

TOPIC -----

- 1) Do the LaserWriter IIf and IIg use microfine toner?
- 2) Is FinePrint different from H-P's RET?
- 3) How does PhotoGrade compare to RET and microfine toner?

DISCUSSION -----

- 1) The LaserWriter IIf and IIg don't use microfine toner, because they get excellent results using the same size toner as before.
- 2) While they function differently, FinePrint and RET are both designed to improve the quality of text and lines without affecting performance.
- 3) PhotoGrade is completely different from RET or microfine toner. RET smooths text and lines. It doesn't improve images. Microfine toner doesn't improve the resolution of images; it just has smaller average toner particles. Since a single 300-dpi dot uses a number of particles, smaller toner has minimal impact on print quality.
