TOPIC -----

I've heard that Apple has been shipping a toner cartridge with new toner for the LaserWriter II for some time. How is this toner cartridge different from the former toner cartridge? Is there a new or updated Safety Data Sheet for this toner?

DISCUSSION -----

Several months before the introduction of the Apple LaserWriter IIg and LaserWriter II f, Apple started shipping a new toner cartridge for the LaserWriter II family of printers. This new toner cartridge has an improved mechanism that provides more consistent feeding of toner to the paper. This is only noticeable when printing gray scale on the Apple LaserWriter IIg and LaserWriter II f. There was also a change in the cartridge that helps prevent toner leaks.

Any toner cartridges that you find in stores today will be of the new variety. Externally, there is no way to tell the old cartridge from the new one.

There is no change to the Materials Safety Data Sheet.
