## LaserWriter IIf/IIg: Add RAM to Correct Margin Problems (2/95)

Article Created: 26 March 1992
Article Reviewed/Updated: 06 February 1995

TOPIC ------------------------------------------------------------

I have margin problems when printing to the LaserWriter IIf and IIg.

DISCUSSION -------------------------------------------------------

The LaserWriter IIf now ships with 4MB and the LaserWriter IIg ships with
8MB of DRAM.  These configurations will improve the margin problems and
some memory management problems.

If your printer has similar problems, the memory can be upgraded to these levels
to resolve the problem.  See your authorized Apple service provider for the
upgrade.
