LaserWriter Select 310: Only Supports PostScript Level I (5/93)

Article Created: 4 May 1993

TOPIC ---

Why does Apple only support PostScript Level I on the LaserWriter
Select 310?

DISCUSSION --

Apple used PostScript Level I on our LaserWriter Select 310 because overall
it's a less expensive solution. Since the printer was geared as an
entry-level solution, there were a couple of major reasons for using
PostScript Level I:

• PostScript Level II requires more RAM in the printer,
  and thus would increase the cost of the printer.

• The features that PostScript Level II provides will most likely not be
  an issue with entry-level users.
