FAX Blind Dialing and LaserWriter Select 360 (3/94)

Article Created: 17 March 1994

TOPIC -----

Is there a way to have the FAX card on the LaserWriter Select 360 perform a "blind dial" (dial without needing a dial tone)?

DISCUSSION -----

There is a %Fax% PostScript device parameter WaitForDialTone which controls this. This is a boolean parameter which if set to FALSE, will permit the FAX card to do "blind dialing". If set to TRUE, the FAX card will insist on receiving a dial tone first. The following PostScript segment will set this parameter:

```
(%Fax%) <</WaitForDialTone false>> setdevparams
```

If you would like this setting to persist beyond power cycles, then the following PostScript code which exits the PostScript server loop, must precede the command line above:

```
serverdict begin 0 exitserver
```
