LW Select 360: Deactivate Sleep Mode W/ PostScript (12/95)

Article Created: 15 December 1995

TOPIC ---

Is there a way to deactivate the sleep mode (part of the built-in Energy Star
features) on the LaserWriter Select 360 from a Unix workstation?

DISCUSSION ---

Downloading the following PostScript code to the LaserWriter Select 360 disables
the sleep mode. After downloading this PostScript code the printer will not go
into energy saving mode until you change the TimeToStandby to some other
setting, in a numeric unit representing minutes.

```
%==========================================================
% Begin PostScript code
%
(%Engine%)  << /Password 0 /TimeToStandby  0 >> setdevparams
%
% End PostScript code
%==========================================================
```
