LaserWriter IIf & IIg: How FinePrint and TrueType Enhance Output

Article Created: 7 October 1991

Article Last Reviewed:

Article Last Updated:

TOPIC -----

- 1) Does FinePrint enhance text only, or graphics too?
- 2) What is the difference between TrueType and FinePrint?
- 3) Do the LaserWriter IIf and IIg sense differences between text and images?

DISCUSSION -----

- 1) FinePrint smooths all black and white objects including:
 - Text
 - Line graphics
 - Line-art scan
- 2) TrueType (or any outline font technology) scales text to look good at the printer resolution. FinePrint takes that high-quality 300-dpi text, and improves the quality further by eliminating the 300-dpi jaggies.
- 3) The printer differentiates between text and images, so that FinePrint smoothing is not performed on images. Smoothing images actually degrades the quality so it is critical to differentiate between these data types.
