LaserWriter: Print Density Adjustment Utility (11/93)

Article Created: 18 November 1993

TOPIC--

The print density adjustments that are available on most of the
LaserWriter printers do not seem to make much of a change in the toner
density. Are there any other methods for altering the toner density
in order to save toner when printing rough drafts?

DISCUSSION--

The toner density adjustment on most of our LaserWriter products
generate only slight visual changes. Depending on the type of
documented being printed there may be no visible changes between the
maximum and minimum density settings.

For more control over toner density there is a third-party product
system extension called Toner Tuner™, from Working Software, Inc.,
that provides additional control of the toner density. Toner Tuner™ is
a system extension that uses PostScript and QuickDraw commands to set
the grayscale values for printed pages. The Toner Tuner™ software
supports system 6 and 7, and all QuickDraw and PostScript based
printers.
