Personal LaserWriter LS: Memory Upgrades (7/93)

Article Created: 21 July 1993

TOPIC -----

I understand that I can upgrade the memory of my Personal LaserWriter LS to a total of 1MB. Does this require special SIMMS, or can I use SIMMS from my Mac Plus? I'm hoping to improve the quality of my graphics.

DISCUSSION -----

You can upgrade the Personal LaserWriter LS using DRAM chips (not SIMMS). However, this really doesn't help with quality since all the processing is done on your computer and not in the printer. If you are looking for ways to increase the speed of the printing, you are better off increasing the RAM in your computer. Also any increase in the CPU speed will decrease the time it takes to process the printing.
