Personal LaserWriter NT: 4MB SIMMs

Article Created: 19 April 1991

Article Last Updated:

TOPIC -----

Are the 4MB SIMMs for the Personal LaserWriter NT the same as those in the general market?

DISCUSSION -----

The requirements for the 4MB SIMMs are the same as for standard Macintosh II SIMMs, but they must be rated at 100ns or faster. They must also fit in a significantly smaller space than is allowed by the Macintosh II family. This eliminates 4MB SIMMs made from lots of 1MB DRAM chips.

A number of vendors advertise compatible 4MB SIMMs. Just check the ads in your favorite Macintosh-oriented magazine, or check with an Authorized Apple Dealer.
