Personal LaserWriter NT: Spurious Paper-Out Light

Article Created: 19 April 1991

TOPIC ---

I'm having a problem with a Personal LaserWriter NT. At power-up, with
nothing connected to the printer, all three LEDs come on briefly, then they
go out, and the paper-out LED starts flashing.

The manual indicates this means the printer is waiting for manual-feed
paper, but obviously it shouldn't be. The engine test prints a normal test
sheet.

DISCUSSION ---

It sounds like the I/O board needs replacing, especially if you can get a good
engine self-test out of the printer. We recommend replacing the board for
test purposes.
