Windows 3.x: Printing to LaserWriter IIg (3/94)

Article Created: 4 March 1993
Article Reviewed/Updated: 9 March 1994

TOPIC --

We're using IBM PCs on a network running Windows 3.0, and we're trying to print
to LaserWriter IIg printers, connected serially through DEC servers. All fonts
print fine except Zapf Dingbats. Knowing that font isn't installed in ROM on
the IIg, is there a fix for Windows 3.0 (or 3.1) that allows printing the Zapf
Dingbat fonts over the network?

DISCUSSION ---

First, convert the Zapf Dingbats Adobe Type 1 font that comes with the
LaserWriter IIg, from resource fork format to text format. You can do this with
a utility called UnAdobe.

Then, prepend the font text with "serverdict begin 0 exitserver" and append an
end of file (CTRL-D). In other words:

```
  %%Begin Download
  serverdict begin 0 exitserver

..
  Text of font
.
.
  eof (CTRL-D)
  %%End Download
```

This will permanently download the font until the power is cycled.

This information is available on pages 39 and 40 of the LaserWriter Reference
manual.
