Printer Share: Prints when Server is Asleep (6/96)

Article Created: 19 June 1996

TOPIC -----

If an Apple serial or SCSI printer (such as the Personal LaserWriter SC or the StyleWriter series) is being shared with Printer Share from a Macintosh that is in Energy Saver "Sleep" mode, will the printer still print a job sent from another Macintosh computer on the network?

DISCUSSION -----

Yes. Although the monitor remains dark on the Macintosh that is sharing the printer, the processor and hard drive become active and the job prints properly.
