## LaserWriter: How To Reset It Via PostScript

This article last reviewed: 8 September 1989

The PostScript command:

```
systemdict begin quit end
```

resets the LaserWriter when connected to the LaserWriter in PostScript batch mode via AppleTalk.

This command removes the Laser Prep file, as well as any Postscript program that has been entered into the LaserWriter. A test page prints after the command has been executed -- if that option is turned on.

NOTE: To send the previous command, you MUST be in the PostScript batch mode of the PostScript interactive mode.

The following command can be used in ANY PostScript mode:

```
serverdict begin 0 exitserver  
systemdict begin quit end
```
