LaserWriter Utility: Can't Print Windows PostScript File (4/95)

Article Created: 3 April 1995

TOPIC -----

I saved a Postscript file from Windows and I'm trying to download it to the LaserWriter using the LaserWriter Utility, but the file will not print. Have you heard of this problem?

DISCUSSION -----

The PostScript file does not print because the Windows driver inserts the control character ^D at the beginning and the end of the file. Just delete the hidden control character ^D before "%!" and after "%%EOF".
