StyleWriter II: 1 MB RAM and Minimum System Config. (8/95)

Article Created: 19 February 1993

Article Reviewed/Updated: 7 August 1995

TOPIC -----

I cannot print to a StyleWriter II from a Macintosh that has 1 MB of RAM and System Software 6.0.7. The StyleWriter II product specification sheet says that this configuration should work.

DISCUSSION -----

A Macintosh with 1 MB RAM works with the StyleWriter II with this configuration only:

- Minimum installation script in the installer.
- StyleWriter II Print Driver (only).
- TrueType INIT only (no other INITs, control panels or other system additions).
- Minimum fonts.
- MultiFinder turned off.
- RAM cache off.
- Print color or grayscale images in black-and-white mode.

For optimum performance, Apple recommends a minimum of 2MB RAM.
