StyleWriter: Remove Bitmapped Fonts To Avoid Default Font Use

Article Created: 13 August 1991

TOPIC -----

I am using a Macintosh Classic and a StyleWriter. I have TrueType fonts and Adobe fonts, and am using Adobe Type Manager.

When I print any document the print quality is very poor, as though it was printed from a dot matrix printer. Installing Adobe Type Manager doesn't seem to have changed anything. What can I do?

DISCUSSION -----

Try removing the bitmapped versions of the fonts. If they are installed, the default printing font will be the bitmapped version.

You will will get over 300 dots per inch when using TrueType fonts.
