

Addendum to the PC Compatibility Card Software Installation Instructions

In the enclosed manual, there is an incorrect step in the “Creating a Drive Container” section of Chapter 6, “Installing the PC Compatibility Card Software.”

When creating a new drive container, do not start the PC as described in step 3 on page 142. Starting the PC before creating a drive container may cause errors during the DOS installation process. The PC environment will automatically start up when you switch to the PC as part of step 1 of the next section, “Installing DOS.” If you are having problems installing DOS, switch back to the Mac OS environment by pressing ⌘-Return. Then click Restart PC in the PC Setup control panel and continue on with the DOS installation instructions.
